Important information

The value of an investment and any income taken from it is not guaranteed and can go down as well as up; you may not get back the amount you originally invested. Past performance is not a guide to the future. Reference to a particular security is for illustrative purposes only, is on a historic basis and does not mean that the security is currently held or will be held within an LGIM portfolio. The above information does not constitute a recommendation to buy or sell any security.

- i. Carbon dioxide equivalent (CO₂ e) is a standard unit to compare the emissions of different greenhouse gases. The choice of this metric follows best practice recommendations from the Task Force on Climate-related Financial Disclosures. Data on carbon emissions from a company's operations and purchased energy is used.
- ii. The carbon reserves intensity of a company captures the relationship between the carbon reserves the company owns and its market capitalisation. The carbon reserves intensity of the overall fund reflects the relative weights of the different companies in the fund.
- iii. Eligibility % represents the % of the securities in the fund which are eligible for reporting (currently cash deposits, derivative and government bonds are ineligible for carbon reporting) and the Coverage % represents the coverage of those assets with carbon scores.
- iv. Green revenues % represents the proportion of revenues derived from low-carbon products and services associated with the fund, from the companies in the fund that have disclosed this as a separate data point.
- v. Engagement figures do not include data on engagement activities with national or local governments, government related issuers, or similar international bodies with the power to issue debt securities.
