FUND AIM

The investment objective of the fund is to track the return of the SciBeta Developed High-Factor-Intensity Multi-Beta (vol, val, mom, pro/inv) Maximum Deconcentration Index- GBP Hedged

RISK AND REWARD PROFILE

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

The risk indicator assumes you keep the product for 5 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less.

For more information, please refer to the Key Risks section on page 3.

WHO IS THIS FUND FOR?

- The trustees of UK registered defined benefit occupational pension schemes, which may be classified as either retail clients or professional clients.
- Although investors can take their money out at any time, the recommended minimum holding period is 5 years.
- Please refer to your professional advisor who should be able to advise you on the suitability of this fund for your scheme.

All performance periods over a year will be annualised. Source: LGIM. Performance based on weekly mid-market prices before the deduction of fees. Withholding tax rates applied to the index by the index provider are generally higher than those the fund. **Past performance is not a guide to the future.**

FUND CHARACTERISTICS

This fund is currently invested wholly in shares of a GBP currency hedged share class of the L&G Global Developed Four Factor Index Fund, a sub fund of the Legal & General Authorised Contractual Scheme (ACS). The ACS is a UK tax transparent vehicle established in the United Kingdom and authorised and regulated by the Financial Conduct Authority. The fund employs an index tracking strategy, aiming to replicate the performance of its benchmark, using a pragmatic approach.

The underlying Fund will invest primarily in securities that make up the constituents of the index. The regional weightings within the index are market capitalisation weighted, but the constituents of each regional underlying sub-index are not market capitalisation weighted. The constituents of the index selected and weighted by a pre-defined set of equity risk-factors, as defined by the index provider. The fund may also invest in permitted deposits, money market instruments, cash, near cash, units in collective investment schemes. The fund may invest in derivatives for the purposes of efficient portfolio management. Currency exposure in the fund will predominantly be hedged back to sterling.

LGIM INDEX FUND MANAGEMENT TEAM

The Index Fund Management team comprises 25 fund managers, supported by two analysts. Management oversight is provided by the Global Head of Index Funds. The team has average industry experience of 15 years, of which seven years has been at LGIM, and is focused on achieving the equally important objectives of close tracking and maximising returns.

KEY RISKS

- The value of an investment and any income taken from it is not guaranteed and can go down as well as up; you may not get back the amount you originally invested.
- The return from your investment is not guaranteed and therefore you may receive a lower or higher return than you anticipated. There will be a variation in performance between funds with similar objectives due to the different assets selected.
- PMC's charges and associated transaction costs are subject to change, with notice for the former and without notice for the latter. Charges and transactions costs deducted from the policy reduce your potential for capital growth in the future.
- Tax rules and the treatment of income and capital gains could change in the future and may be applied retrospectively.
- Inflation reduces the purchasing power of money over time as the cost of purchasing goods and services increases. If the rate of inflation exceeds the rate of return on your portfolio, it will erode the value of your portfolio and its investments in real terms.
- In extreme market conditions it may be difficult to realise assets held for a fund and it may not be possible to redeem units at short notice. We may have to delay acting on your instructions to sell or the price at which you cancel the units may be lower than you anticipated.
- The value of a fund's assets may be affected by uncertainties such as international political developments, market sentiment, economic conditions, changes in government policies, restrictions on foreign investment and currency repatriation, currency fluctuations and other developments in the laws and regulations of countries in which investment may be made.
- PMC seeks to mitigate counterparty risk wherever possible on behalf of its policyholders through a variety of measures which include: each fund's non-cash assets being held with independent custodians, sweeping cash (where appropriate) overnight into the LGIM's range of Liquidity funds (above a de minimus level), using the delivery versus payment system when settling transactions and the use of central clearing for exchange traded derivatives and forward foreign exchange transactions. However, in the event of the failure of a counterparty, custodian or issuer there is a residual risk that a fund may suffer asset losses which are unrecoverable.
