Manager's Investment Report

Investment Objective and Policy

The Fund aims to track the total return of the Markit iBoxx Sterling Corporates 1-5 Index (the "Index") (after adjustment for management charges and taxation).

The Fund will invest primarily in the securities that make up the constituents of the Index. The bonds the Fund invests in will be primarily composed of short dated investment grade Sterling denominated corporate bonds and will be held with weightings generally proportionate to the weightings in the Index.

The Fund may also invest in other transferable securities, permitted deposits, money market instruments, cash, near cash and units in collective investment schemes.

The Fund may hold derivatives for the purpose of efficient portfolio management.

Manager's Investment Report

During the period under review, the bid price of the Fund's I-Class accumulation units rose by 1.15%. Markit iBoxx, the Index compiler, calculates the benchmark Index at the end of the business day using closing prices, whereas the Fund is valued using prevailing prices at 12 noon. Therefore, for tracking purposes the Fund has been revalued using closing prices. On this basis over the review period, the Fund performance was 1.16%, compared with the Index performance of 1.12% (Source: Bloomberg), producing a tracking difference of +0.04%.

Past performance is not a guide to future performance.

The value of investments and any income from them may go down as well as up.

Market Review

The major international bond markets struggled to make headway as central banks began to embark on withdrawing the extraordinary monetary support that has been in place since the global financial crisis. With global economic growth accelerating, expectations of rising inflation have also held back bonds, although as equity markets became more volatile there was some rotation back into government bonds. The US Federal Reserve (Fed) raised interest rates by 0.25% in March and again in June, with investors discounting the prospect of two further rate hikes in 2018. The Fed also continued unwinding its asset purchase programme, known as quantitative easing (QE). For UK-based investors, Sterling's weakness has resulted in positive currency adjusted returns from international bonds over the period.

Although the European Central Bank (ECB) announced it would cease its QE programme at the end of 2018, the ECB has reassured investors that it would not raise interest rates until at least mid-2019. The Bank of Japan's (BOJ) negative interest rate policy, and its announcement that it will intervene if necessary to keep the yield on benchmark 10-year bonds at around 0%, underpinned Japanese government bonds.

Gilts recorded a modest gain over the review period. Although inflation remains above the Bank of England's (BOE) 2% target, the benchmark consumer price Index peaked in November and fell to its lowest rate since March 2017 in June. The UK economy

Manager's Investment Report continued

grew at its slowest pace for six years during the first quarter of 2018, leading the BOE to shelve plans for an interest rate hike in May. Despite lower inflation, Index-linked gilts marginally outperformed their conventional counterparts, underpinned by liability driven demand from UK institutional investors. Sterling-denominated corporate bonds have underperformed gilts on concerns about the UK economic outlook and corporate profits, amid continuing uncertainty as to the outcome of Brexit negotiations with the European Union (EU).

Fund Review

All investment activity was prompted either by unit holder activity or by monthly changes in the profile of the benchmark.

During the period 37 bonds were added to the Index. Seventeen were new issues and the rest were existing bonds that entered the Index by falling below five years to maturity. Six bonds left the Index after the amount remaining in issue following a corporate action fell below the Index minimum issue size, one bond left after being called. A further sixteen bonds with less than a year to maturity also left the Index.

The Fund participated in fourteen new issues from issuers including HSBC, Volkswagen, Swedbank AB and Santander UK PLC. The Fund also took part in ten corporate actions across a range of sectors.

The Fund experienced net positive cash flow during the period. The cash flows were used to adjust the Fund's holdings in such a way so as to ensure the Fund maintained an Index distribution at all times. The Fund was also rebalanced at each month end in line with the revised Index distribution.

Outlook

Looking ahead, the near term global growth outlook remains strong and broad based, however subject to risk coming from a more protectionist US economic policy, idiosyncratic Emerging Market (EM) political noise, a potentially uncertain EM inflation backdrop and, as always, any disruption to the Chinese growth story. The US Fed is likely to continue hiking once a quarter with inflation now close to target and pipeline price pressures building. In Europe, the ECB has signalled tapering but no rate increases until late 2019 whilst concerns still remain that Italy's fledgling coalition government is on a collision course with the European Union. We still believe that Brexit negotiations will be a leading driver of relative performance during 2018 with parliament unlikely to have a meaningful vote until October at the earliest, the potential for material news (in either direction) should occur in the next few months.

The Fund remains well positioned to capture the performance of the Short-Dated Corporate Bond market.

Notes to the Financial Statements

1. Statement of Compliance

The Financial Statements have been prepared in compliance with UK Financial Reporting Standard 102 (FRS 102) and in accordance with the Statement of Recommended Practice for UK Authorised Funds issued by the Investment Management Association in May 2014 (2014 SORP).

2. Accounting Policies

The accounting policies applied are consistent with the most recent annual Financial Statements.

(a) Basis of Preparation

The Financial Statements have been prepared on a going concern basis, under the historical cost convention as modified by the revaluation of certain financial assets and liabilities measured at fair value through profit or loss.

Past performance is not a guide to future performance.

The price of units and any income from them may go down as well as up.

Ongoing Charges Figures

	15 Aug 18	15 Feb 18
I-Class	0.14%	0.14%
C-Class	0.09%	0.09%
L-Class	0.05%	0.05%

The Ongoing Charges Figure (OCF) is the ratio of the Fund's total disclosable costs (excluding overdraft interest) to the average net assets of the Fund.

The OCF is intended to provide a reliable figure which gives the most accurate measure of what it costs to invest in a fund and is calculated based on the last period's figures.

Distribution Information

I-Class

The distribution payable on 15 October 2018 is 0.5512p per unit for distribution units and 0.5988p per unit for accumulation units.

C-Class

The distribution payable on 15 October 2018 is 0.5523p per unit for distribution units and 0.5999p per unit for accumulation units.

L-Class

The distribution payable on 15 October 2018 is 0.5534p per unit for distribution units.

Risk and Reward Profile

- This risk and reward indicator is based on historical data which may not be a reliable indication of the Fund's risk and reward category in the future.
- The category number highlighted above reflects the rate at which the Fund's unit price has moved up and down in the past. If the Fund has less than five years' track record, the number also reflects the rate at which the index the Fund tracks has moved up and down in the past. Higher numbers mean the potential reward could be greater, but this comes with increased risk of losing money.
- The Fund is in category two because it invests in company or government bonds which are sensitive to changes in interest rates, inflation and credit. This can be driven by political and economic changes and other significant events and may cause the value to go up and down. Bonds that are closer to their maturity date tend to be more stable in value. Bonds are generally considered to be higher risk investments than cash, but lower risk than company shares.
- The Fund's category is not guaranteed to remain the same and may change over time.
- Even a fund in the lowest category is not a risk free investment.

Information on Tracking Error

The 'Tracking Error' of a Fund is the measure of the volatility of the differences between the return of the Fund and the return of the benchmark Index. It provides an indication of how closely the Fund is tracking the performance of the benchmark Index after considering things such as Fund charges and taxation.

Using monthly returns, over the review period, the annualised Tracking Error of the Fund is 0.05%, whilst over the last three years to the end of August 2018, the annualised Tracking Error of the Fund is 0.10%. These Tracking Errors are within the anticipated Tracking Error levels set out in the Fund's Prospectus of +/-0.50% per annum.

EU Savings Directive

The Fund has been reviewed against the requirements of the Directive 2003/48/EC on Taxation of savings in the form of interest payments (ESD), following the HM Revenue & Customs debt investment reporting guidance notes.

Under the Directive, information is collected about the payment of distributions to residents in certain other countries and is reported to HM Revenue & Customs to be exchanged with Tax authorities in those countries.

The Fund falls within the 25% debt investment reporting threshold. This means that details of all distributions and redemption proceeds paid to non UK investors will be reported by Legal & General (Unit Trust Managers) Limited to HM Revenue & Customs to be exchanged with the relevant Tax authorities.

Dual Pricing Arrangement

The Manager's fixed dual pricing arrangement has a set spread to account for the costs of transacting in a particular Fund. Where the Manager operates a box through which unit subscriptions and unit redemptions are netted into a single trade instruction to the Trustee, the netting reduces the actual transaction costs and this generates a revenue to the Manager. The revenue generated from this activity is calculated on a monthly basis and returned to the Fund in the form of a payment from the Manager. This provides an enhanced return to the Fund, though the size of any return will be dependent on the size of subscriptions and redemptions.
